Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Applicants' Admitted Prior Art (AAPA) in view of Berthiaume US Patent No. 5,846,259.

In the background section of the written description, the applicants admit that the use of telescoping catheter, as claimed, is known in the prior art with the exception of telescoping catheter comprising a third (additional) sheath. They further teach that their invention is directed to an improved telescoping catheter, which includes a third sheath in addition to the prior art telescoping catheters. Berthiaume discloses a telescoping catheter for insertion of body lumen, such as a blood vessel, the catheter comprising a guidewire and catheter shaft, which includes a first, second and third telescoping sheaths as presently claimed.

Therefore, at the time of the applicants' invention, it would have been obvious to one skilled in the art to incorporate additional/third sheath into the catheter shaft of the prior art in order to provide support and protection for the guidewire if the telescoping catheter needs to be further extended as presently claimed.
